PLC2

Training Calendar

2024

Training Formats

OL Online

Our PLC2 online training courses offer you the opportunity to acquire technical expertise in the desired and required depth. You can take part in the online training courses, which always take place on a half-day basis, from your home or office.

WE Webinar

The free 1-hour PLC2 webinars give participants a brief insight into a specific problem or topic. Our webinars shine with technical depth despite the limited time available. They are a good introduction to a certain topic.

SE Seminar

Our free 1-day PLC2 seminars give developers, team leaders, and company management staff a comprehensive insight into the numerous possibilities surrounding the use of programmable technologies.

Our competent instructors convey even difficult facts and contexts to you in an easily understandable way, while being present on-site. Individual questions and problems can be identified.

ES Easy Start

Our 2-day Easy Start training courses, which have been successful for years and are in great demand, were developed to make it easier for »newcomers« among FPGA and MPSoC users to get started in the FPGA/MPSoC field and to train and support them in the use of the technology. This training series is also suitable for project managers, team leaders and group leaders.

The focus of this training format is on practical application with modern FPGAs/MPSoCs and less on the theoretical basis. The participants will be professionally guided by our experienced PLC2 experts to implement their own FPGA/MPSoC projects in order to take the first steps towards independent development of complex FPGAs/MPSoCs. Deeper theoretical foundations are taught in other training courses.

WO Workshop

As the world's first and long-standing Authorized Training Provider (ATP) of Xilinx - today AMD, we always have access to brand-new technologies, methods, and development tools and work right at the forefront of the technological progress.

In our 2- and 3-day workshops, we share our knowledge with developers and train them in technical depth. During the training, the participant has the chance to consolidate and reinforce the knowledge imparted by our experts in practical exercises. The training portfolio ranges from workshops covering all HDL users to specific AMD technology training. The content focuses on methodologies for development and verification, the architecture of the latest building blocks, physical implementation, and the application of the highly complex development tools.

PW Power Workshop

In the 5-day Power Workshops, our experts provide developers with particularly hands-on training in technical depth. Here, care is taken to ensure that the knowledge imparted is consolidated in the form of practical exercises.

Under the guidance and supervision of our competent trainers, the participants work intensively with laptops/PCs and, if required, with evaluation boards. Complex tasks are implemented, and the functionality is proven with the help of the simulation and the evaluation board.

The Power Workshops are suitable for all those who want to dive deeply into a topic and attach a lot of importance to practical relevance.

LT Long Term Education

Are you new to the FPGA world and want to become an expert in a very short period of time? Then you found your solution. We at PLC2 turn engineers and technicians into FPGA experts. Our 3 months training program provides you with the entire know-how on the latest state-of-art AMD FPGAs and SoCs. Our comprehensive training material includes boards, software, labs, telephone support, and a personal mentor.

Architecture

In today's competitive world of electronic engineering the difference is made at the system architectural level. Making the right choices at the start of your design makes the difference between mediocre versus excellent results. We at PLC2 can help you by providing training courses in the architecture area of the world's leading FPGAs from AMD. The workshops provide the foundation you need to get started with your FPGA development or to optimize your FPGA designs. Our classes are suited for both, FPGA newcomers and experienced developers.

Essentials of Microprocessors	WO	1						all year on request							€ 800 / 10 TCs
Essentials of Microprocessors	OL	1						all year on request							€ 600 / 8 TCs

F Frankfurt / Main FR Freiburg M Munich O Online S Stuttgart

Tools & Methodology 1/3

The HDL-based development method simplifies the development cycle, but this requires the developer to have good knowledge of digital circuit design. It is not enough to know how to implement combinational and sequential circuits, it is very important to know how to implement your design in the FPGA architecture to maximize benefits in size, power, and performance.

The PLC2 training courses in the »Tools and Methodology« category help developers use and apply the development tools for these latest technologies.

Languages 1/2

Familiarize yourself with the latest design methods to get the most out of your chosen technology. Learn the fundamentals and become an expert in HDL languages such as VHDL or System Verilog.

We offer a variety of workshops and training sessions to introduce you to System Verilog HDL and VHDL. You will learn the VHDL synthesis and simulation concept and understand how to use different synthesis or simulation constructs to design your FPGA.

Embedded 1/3

Are you a beginner in the embedded world or a very experienced embedded developer? We at PLC2 tailor our embedded classes to your level. Our workshops include everything you need to know on how to develop embedded solutions with AMD's wide range of SoCs. Understand the embedded design flow for the latest technologies from AMD including Versal adaptice SoC. There are software specific training topics on C/C++ as well as Linux and driver development under Linux.

DSP

OL Online WO Workshop PW Power Workshop

With their inherent flexibility, AMD FPGAs and SoCs are ideal for high-performance or multi-channel digital signal processing (DSP) applications that can take advantage of hardware parallelism. AMD FPGAs and SoCs combine this processing bandwidth with comprehensive solutions, including easy-to-use design tools for hardware designers, software developers, and system architects. We at PLC2 will teach you how to get the maximum out of these FPGAs and SoCs using Vitis Model Composer in interaction with Matlab Simulink. Additionally, you will learn how to develop HDL-based DSP functions.

Compact Vitis HLS	WO	3		14–16, F			06–08, M			27–29, FR			27–29, S		€ 2,300 / 30 TCs
Compact Vitis HLS	OL	3			18–20, O				29–31, O			21–23, O			€ 1,900 / 24 TCs
Compact DSP Design for FPGAs Using Vitis Model Composer	WO	3		05–07, M		08–10, F					02–04, FR			16–18, B	€ 2,300 / 30 TCs
Compact DSP Design for FPGAs Using Vitis Model Composer	OL	3				08–10, O								16–18, O	€ 1,900 / 24 TCs
Compact DSP Design for Versal Using Vitis Model Composer	WO	3						all year on request							€ 2,300 / 30 TCs
Compact DSP Design for Versal Using Vitis Model Composer	OL	3						all year on request							€ 1,900 / 24 TCs
Professional DSP Design Using Vitis Model Composer	PW	5		05–09, M		08–12, F					02–06, FR			16–20, B	€ 3,250 / 40 TCs
Professional DSP Design Using Vitis Model Composer	OL	5				08–12, O								16–20, O	€ 2,800 / 32 TCs

Connectivity 1/2

How do you keep up with the edge network emerging applications that are redefining hardware requirements for electronic designers? Are you designing the next generation AI for IoT, embedded vision, hardware security, 5G communication, or industrial/automotive automation for your company? Then PLC2 can teach you how the state-of-art AMD products can be used in your application for processing and bridging needs including high bandwidth sensor and display interfaces, video processing and machine learning inferencing.

OL Online WO Workshop

Training	Format	Duration	January	February	March	April	May	June	July	August	September	October	November	December	Fee
AXI Interface Technology	WO	2			05–06, FR			26–27, F			09–10, B		28–29, M		€ 1,700 / 20 TCs
AXI Interface Technology	OL	2				22–23, O				01–02, O				09–10, O	€ 1,300 / 16 TCs
Compact Zynq UltraScale+ RFSoC	WO	3		14–16, B			13–15, FR				16–18, F			09–11, M	€ 2,300 / 30 TCs
Compact Zynq UltraScale+ RFSoC	OL	3					13–15, O							09–11, O	€ 1,900 / 24 TCs
Compact UltraScale: High-Speed Memory Interfacing	WO	3						all year on request							€ 2,300 / 30 TCs
Compact UltraScale: High-Speed Memory Interfacing	OL	3						all year on request							€ 1,900 / 24 TCs
Compact UltraScale: Serial Transceivers	WO	3		26–28, M			06–08, B				23–25, F				€ 2,300 / 30 TCs
Compact UltraScale: Serial Transceivers	OL	3					06–08, O						18–20, O		€ 1,900 / 24 TCs
Designing with Ethernet MAC Controllers	WO	2	24–25, M				27–28, S				11–12, B		21–22, FR		€ 1,700 / 20 TCs
Designing with Ethernet MAC Controllers	OL	2				24–25, O							13–14, O		€ 1,300 / 16 TCs
Compact Versal Adaptive SoC: Connectivity	WO	3				03–05, B				12–14, S			04–06, F		€ 2,300 / 30 TCs
Compact Versal Adaptive SoC: Connectivity	OL	3			18–20, O							07–09, O			€ 1,900 / 24 TCs
Compact UltraScale: Integrated PCI Express System	WO	3		05–07, S			22–24, FR				02–04, M			02–04, B	€ 2,300 / 30 TCs
Compact UltraScale: Integrated PCI Express System	OL	3				15–17, O							11–13, O		€ 1,900 / 24 TCs
Compact Versal Adaptive SoC: PCI Express Systems	WO	2			04–05, M			03–04, B				14–15, S			€ 1,700 / 20 TCs
Compact Versal Adaptive SoC: PCI Express Systems	OL	2			21–22, O								21–22, O		€ 1,300 / 16 TCs
